Technology Transfer Guide - for facilitating the technology transfer of the innovations developed by Process Innovation Nucleus S.R.L.

We are kindly putting at your disposal a guide for facilitating the technology transfer of the innovations developed by our company as a result of implementing the project “Prototype for verifying the practical potential of an innovative nanotechnology and production line/Prototip pentru validare nanotehnologie inovatoare si linie de productie”, having SMIS 104269 and Financial Agreement 71/08.09.2016. Our guide is part of the company’s strategy to disseminate project results towards our target group and to facilitate the communication with our clients, respectively the exploitation of the developed innovations.

The guide provides you with complex information about our innovations, including on how to access our innovations, such as by acquiring or renting one of our equipment for producing nanopowders, acquiring our nanopowders which are produced in-house, licensing or technology, acquiring our know-how packages/training packages/installation and maintenance packages, etc. Our nanopowders target primarily the automotive industry, in particular automotive component manufacturing; other applications are however possible, such as environmental applications, consumer goods industry applications, medical applications, etc.

The project is co-funded by the European Regional Development Fund through the Competitiveness Operational Programme 2014-2020.

Please complete the Contact form on our website if you wish to request our guide.
